Logo guide

Tago (formerly PassVault). One page, for anyone putting the logo on something.

1. The logo

Idea: a T traced on Android's nine-dot unlock grid. The secret pattern only you know becomes the app's initial; the coral dot is where the trace starts. *Tago* is Tagalog for "hidden, kept out of sight".

Horizontal (primary) · stacked · symbol · reversed. Use the symbol alone only where the name is already present (app icon, favicon, avatar).

2. Clear space

Keep a clear zone of **one node** on every side: the diameter of one of the large dots in the T. It scales with the logo, so measure it on the artwork at the size you use.

3. Minimum size

Version	Screen	Print
Horizontal	96 px wide	25 mm wide
Symbol	24 px; below that, the **small** files (to 16 px)	6 mm

4. Colour

Name	HEX	RGB	CMYK (converted)	Use
Tago Indigo	#5B56A6	91 86 166	45 48 0 35	Symbol, app icon, buttons
Coral	#F0623A	240 98 58	0 59 76 6	Start node and main actions only
Ink	#1E1B26	30 27 38	21 29 0 85	Wordmark, text, dark backgrounds
Paper	#FFF7F4	255 247 244	0 3 4 0	Backgrounds, reversed logo

Approved pairs: colour logo on paper or white · paper logo on ink · white logo on indigo · black or white one-colour anywhere else. CMYK values are converted, not proofed: proof with your printer, and ask them to match a Pantone from a bridge guide if you need a spot colour.

5. Typography

The wordmark is custom drawn: always use the files, never type "tago" in a font. In the app and in text, use the system font (Roboto on Android; `sans-serif-medium` for headings).

6. App icon

One colour: paper T on indigo. No coral on the launcher icon: at that size it reads as a notification dot. Android 13+ themed icons use the monochrome layer.

7. Don'ts

- Don't stretch, squash, rotate or mirror the logo, or redraw the T as another letter.
- Don't recolour outside the palette, or put coral anywhere but the start node.
- Don't add shadows, outlines, gradients or glows.
- Don't rearrange or resize the symbol and wordmark within a lockup.
- Don't drop the unused dots: without them it is just a T.
- Don't place it on busy photos without a solid indigo or ink tile behind it.

8. Files

`branding/tago/svg` masters (SVG, filled shapes, no fonts) · `branding/tago/png` exports, including the Play Store icon (512 px) and feature graphic (1024 × 500) · `branding/tago/build` the scripts that generate everything, including the app's icon drawables: change geometry or colour there, then re-run them.
